TECHNICAL SKILLS

AI / ML

LangGraph · RAG · Azure OpenAI · scikit-learn · XGBoost · MLflow

Backend

Python · FastAPI · PHP · Symfony

Data

PostgreSQL · Elasticsearch · MariaDB

DevOps

Docker · Azure · CI/CD (GitLab, GitHub Actions)

Frontend

Vue.js · TypeScript · MapLibre

LANGUAGES

Spanish	Native
Catalan	Native
English	B2
French	A2

Software engineer with **2+ years building backend systems in production** (APIs, integrations and geospatial tooling in AdTech), now focused on **applied AI**: LLM agents, RAG and end-to-end ML. I care about making AI work as reliable software, not just as a prototype. MSc in AI at UNIR.

WORK EXPERIENCE

AI Engineer (Intern) · Sopra Steria

Sept 2026 – Nov 2026 · Remote

Curricular internship (MSc AI) in the AI team, building a prototype for an internal IT-support use case.

- Building an **AI agent that resolves L1/L2 IT incidents** end to end: an LLM router classifies each ticket, and a LangGraph agent retrieves runbooks via RAG, runs diagnostics and proposes a fix, escalating to a person when needed.
- Designed and evaluated the incident router: **97.5% classification accuracy (macro F1 0.97)** and 99.4% correct routing decisions on a 163-query evaluation set.
- Designed for control and traceability: human approval before sensitive actions, resumable state in PostgreSQL and full tracing with LangSmith.
- Built the full application around the agent: FastAPI backend, Vue 3 frontend, Keycloak login and automated deployment to Azure (Docker, GitHub Actions, Terraform), with 140+ automated tests.

Software Engineer · EXTE

Sept 2024 – Present · Barcelona

Intern from Sept 2024, full-time since Feb 2025. Started on CRUD services; now build and maintain **exte.market**, the new platform that replaces the legacy system for the markets team.

- Helped migrate the markets team **from a legacy monolith to exte.market**, a standalone app with a modern, personalised interface: **data exports dropped from ~2 minutes to ~10 seconds**, and the team no longer depends on the company's central platform for daily work.
- Built the campaign planner (map and planning views driven by formats, business rules and POI × screen-radius proximity), **cutting planning time from days to minutes**.
- Developed the deals and marketplace modules, kept in sync with three external DOOH platforms (Broadsign, VIOOH, Hivestack) over their REST APIs.
- Designed secure REST APIs (OAuth2, JWT) on Symfony/Yii2, MariaDB and Elasticsearch with GitLab CI/CD, and contributed to the company's Vue.js design system.

Aluminum Carpenter · MAFAC Vallés, SLL

Jun 2020 – Sept 2023

- Hands-on production environment that built teamwork, accountability and a work ethic I carry into every engineering role.

PROJECTS

F1 Championship Predictor · Python · scikit-learn · MLflow · FastAPI

- Machine-learning model that estimates each driver's chance of winning the F1 championship after every race, trained on four decades of F1 seasons. It picks the eventual champion **79% of the time, beating the simple rule "the current leader wins" (73%)**.
- Built as a complete product: automated data pipeline, model comparison in MLflow, an API and a live dashboard updated nightly.

Wildfire Risk in Catalonia · MSc thesis, co-authored · Python · XGBoost

- Model that predicts the weekly risk of a wildfire starting in each of Catalonia's **947 municipalities**, built from public satellite, weather and fire data and compared against the official fire-danger index (FWI).

EDUCATION

MSc Artificial Intelligence

2026 – Feb 2027 (expected)

International University of La Rioja (UNIR)

Machine Learning · NLP · MLOps · Generative AI · Thesis: wildfire risk prediction

BSc Computer Engineering

2021 – 2025

Autonomous University of Barcelona (UAB)

*Information Technology specialization · Thesis Inventory Planner DOOH with EXTE, graded **9.9/10***
